LEADERS IN RESUABLE TRANSPORT PACKAGING

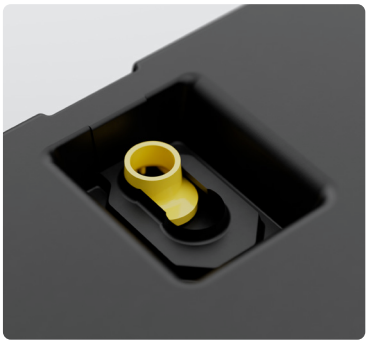

uni-pak®

Uni-Pak®

44”x44” | Space Saver

As the original sleeve-pack system introduced to the market—setting the standard for many of today’s designs—Uni-Pak is a reusable, collapsible container system designed for storage and transport in closed-loop systems. Engineered for operations where space constraints, return efficiency, and product protection are critical, it provides a systems-based alternative to wood pallets, corrugated boxes, fiber drums, nylon bags, and other limited-life returnable packaging.

Type	Construction	Market	Interior Demensions		Pallet Weight	Cover Weight	Outbound		Return		Ratio	
			L	W			2 High	3 High	2 High	3 High	2 High	3 High
Uni-Pak	Twinsheet	North American	41.4”	41.4”	21.33lbs	14.2lbs	56	84	415	460	1:7.4	1:5.5

* Tolerances are available upon request **Load capacity may vary +/- depending on the nature of the load, stacking confi guration, and handling method

Multiple Footprints
A design that is available in multiple footprint sizes, accommodating varying product dimensions and handling requirements.

Nestable
A design that allows units to partially fit within one another when empty, reducing storage volume and improving warehouse utilization and return ratio.

Collapsible
A structure capable of folding down quickly for efficient return and storage without full disassembly, improving warehouse utilization and increasing return ratio.

Locators
An interlocking feature in which female details on the pallet engage corresponding male features on the cover, enabling two containers to stack securely while maintaining alignment and load stability.

Castling
A sleeve design that extends into pallet leg openings, transferring vertical loads through the corners to improve stacking strength and load distribution.

Slidelock (and Uni-Klip)
A locking mechanism that enables fast, tool-free assembly and disassembly—one container, one person, one minute—by securing the sleeve within the track of the pallet and cover.

Split Configuration
A sleeve design consisting of separable sections that allow partial removal for easier access while maintaining structural performance.
